

# OFFLINE

## Midterm website report

A six-page website for a fictional student club that brings people together for screen-free creative evenings. The report explains the visitor, design choices, implementation and responsive layouts.

**Draft awaiting submission details.** The final version requires the students' names and real contributions, both public links, and the students' own reflection. This draft must be completed before submission.

### Project team

Student names are awaiting confirmation. Detailed contributions appear on the following page.

# Team contributions

The team details have not yet been supplied. Each student must record the complete page they build, its styling, interactions and their own repository commits. No contribution is assigned to an unnamed student in this draft.

## Shared website structure

The project uses one navigation, shared fonts and a consistent palette across all six pages. Page content is kept in editable fragments, while a small build script produces the complete root HTML files with the same header and footer. This gives each page a clear place in the source while keeping shared components consistent.

The final contribution record should identify what each person actually completed and can explain. Every member needs a comparable part of the website and at least one complete page. Their commits must be made by their own account in the shared repository.

## Individual defense

Each student must defend the project independently: explain their pages and design choices, answer questions about their code and make a small change without help. The accompanying practice guide points to the source structure and suggests changes to rehearse. It does not replace understanding the implementation.

# The idea and its visitors

OFFLINE is a fictional campus club for students who want a low-pressure way to meet people and make something with their hands. Its sample evenings cover creative activities, tabletop games and slower social sessions. A visitor can understand the club, compare gatherings, read a creative prompt and save a personal plan.

The topic gives the website a specific visitor and a clear reason to exist. A screen-free club also creates useful future scope for an Endterm or Final project: real session management, member accounts or reservations can be added to the current static front end. The current events are sample content; the planner is a local demonstration.

## Six pages with distinct purposes

| Page        | Visitor purpose                                     |
|-------------|-----------------------------------------------------|
| Home        | Understand the idea and discover the next gathering |
| Gatherings  | Compare sessions and consult the timetable          |
| The club    | Understand the club story and principles            |
| Field notes | Read observations and try creative prompts          |
| The toolkit | Use practical activities for an evening together    |
| Make a plan | Choose a gathering and save a personal reminder     |

## A memorable visual solution

The home page treats the club like a handmade poster: large typography, asymmetrical composition and original vector artwork give it a recognizable opening. The other pages use the same palette and navigation while changing their content layout to suit the task. The design is custom; Bootstrap supplies useful layout and interaction primitives.

# Style and design choices

The visual direction takes cues from workshop flyers, notebooks and a shared table. Warm paper and dark ink make the site feel tactile, while orange marks actions and expressive details. Consistent spacing, borders, type and shared navigation hold the six pages together.

**Paper**  
#ff5f2e9

**Ink**  
#24251f

**Orange**  
#f45d32

## Type and main elements

**Space Grotesk** is used for headings, where its geometric shapes support the poster style. **DM Sans** carries body copy and controls, giving longer instructions and form fields a calmer rhythm. Both fonts are served locally with their licenses, so the website does not depend on a live font service.

Buttons, navigation links, cards and form controls reuse the same visual language. The custom illustrations use flat shapes rather than stock photography. Hover feedback and visible focus states support interaction. Decorative movement respects the visitor's reduced-motion preference.

## Responsive choices

The layout uses Bootstrap's grid and custom CSS Grid and Flexbox rules. At narrow widths, content stacks, the navigation collapses into a menu and large headings scale down. Tablet layouts retain enough space for comparison, and desktop layouts use broader compositions. Own media queries handle page-specific details and prevent content from exceeding the viewport.

## Credits

Original layout and vector artwork, with AI assistance in development and content. Space Grotesk by Florian Karsten and DM Sans by Colophon Foundry are distributed under the SIL Open Font License. Bootstrap 5.3.8 is distributed under the MIT License. Attribution and license files are included with the source; no downloaded website template or theme is used.

# Implementation

| Course requirement | Implementation                                                                          |
|--------------------|-----------------------------------------------------------------------------------------|
| Semantic HTML      | Header, navigation, main, sections, articles and footer; meaningful headings and labels |
| Form               | The personal gathering planner uses labeled controls and input validation               |
| Table              | Gatherings includes a schedule with column headers and a caption                        |
| Flexbox and Grid   | Shared alignment, expressive page compositions and responsive cards                     |
| Own media queries  | Navigation, type and page layouts adapt to 375, 768 and 1280 px                         |
| Bootstrap          | Locally bundled grid, navigation collapse and styled components                         |
| Static deployment  | Relative asset paths and generated root HTML support GitHub Pages                       |

## Interactions and scope

The front end adds useful interactions without a server: visitors can filter sample gatherings, save planner data locally and download a calendar reminder. The interface clearly presents the website as a student concept and does not claim that the personal plan reserves a real place.

## Build and publication

The generated HTML pages and bundled assets can be published from the repository root. The build script remains in the source so edits to page fragments can be reproduced. A live deployment must be opened and checked after publication, and the real public URLs must be included in the final report.

# Evidence and conclusion

## Responsive evidence

All six pages fit 375 px, 768 px, and 1280 px viewports without horizontal document scrolling. The browser reported no uncaught JavaScript errors or failed site resources in those 18 page/width combinations. In Chromium 153.0.8010.12, all 21 visitor checks passed, including navigation, filters, FAQ, downloads, planner validation, local save and restore, editing and deletion. The recorded browser audit ran against a local static server.

## Conclusion and reflection

The website brings the club idea into six connected pages with a consistent style, sample gathering information, practical content and a personal planner. The students must add their own short reflection on what they learned, the decisions they made and the code they can explain at the defense.

## Screenshot guide

Pages 7 to 24 show the six website pages in order: Home, Gatherings, The club, Field notes, The toolkit and Make a plan. Each has a capture at 375, 768 and 1280 px. The enlarged first viewport keeps the main interface readable, while the full-page overview records the complete layout. The screenshot labels state the source HTML filename and viewport width.

NOTE 01 / ON GETTING STARTED / 3 MIN READ

## The blank page isn't a test.

There's a particular kind of hesitation that arrives with a new notebook. The first mark suddenly feels far too important.

Give the page a smaller job. It doesn't have to hold your best idea. It can hold five lines, a rubbing of a leaf, or a list of things you noticed on the way home.

A useful constraint makes the first move easier: one colour, two minutes, only shapes with corners. Choose a rule that feels playful, then let the page surprise you.

When the timer ends, resist deciding whether the result is good. Ask a more useful question: *what would I like to try next?*
